Hip(s)

Reported by patient.

Location: left

Quality: stabbing; throbbing; sharp

Severity: severe

Duration: continuous since onset

Timing: acute

Context: sports injury

Alleviating Factors: rest; limited weight bearing

Aggravating Factors: standing; walking

Associated Symptoms: no numbness; no tingling; no redness; no warmth; no ecchymosis; no buckling; no radiation down leg; no drainage; no fever; no chills; no weight loss; no change in bowel/bladder habits; **weakness; swelling; catching/locking; popping/clicking; grinding; instability**

Previous Surgery: none

Prior Imaging: none

Previous Injections: none

Previous PT: none

Work Related: no

Working: regular duty

E is a 11 y/o NC of Left Hip pain. Mother reports that the injury occurred approximately November 5th, 2018. She states that while tumbling at cheerleading practice, she landed hard on her left hip. She noted severe pain and was able to bear only minimal weight through the left lower extremity. Patient reports since the injury she has had pain with ambulating and has noticed internal rotation of her leg. She has increased pain with range of motion, and no external rotation. No previous complaints and no history of congenital hip issues. Mother reports that she and E both have hypermobile hip joints but neither have ever experienced significant injury or pain with regard to hips.

ROS

Patient reports **muscle aches, muscle weakness, arthralgias/joint pain, and swelling in the extremities** but reports no back pain. She reports no fever, no night sweats, no significant weight gain, and no significant weight loss. She reports no chest pain, no arm pain on exertion, no shortness of breath when walking, no shortness of breath when lying down, no palpitations, and no known heart murmur. She reports no cough, no wheezing, and no shortness of breath. She reports no rashes. She reports no fatigue. She reports no swollen glands and no excessive bleeding.

Physical Exam

Patient is an 11-year-old female.

Constitutional: General Appearance: healthy-appearing, NAD, and normal body habitus.

Psychiatric: Orientation: oriented to time, place, and person.

Hip/Pelvis Appearance: Inspection: normal axial alignment and pelvis level.

Hips: Bony Palpation Left: no tenderness of the iliac crest, the ASIS, the pubic tubercle, the sciatic notch, the ischial tuberosity, or the SI joint and tenderness of the greater trochanter. Soft Tissue Palpation Left: no tenderness of the biceps femoris muscle, the semitendinous muscle, or the semimembranous muscle and tenderness of the hip flexor muscles, the hip adductor muscles, and the piriformis. Active Range of Motion Left: limited; internal rotation noted at rest and painful with external rotation. Passive Range of Motion Left: limited and pain elicited by motion (internal and external rotation). Special Tests Left: All movement is painful.. Strength Left: flexion 1/5, extension 1/5, adduction 1/5, and abduction 1/5.

Skin: Left Lower Extremity: normal.

Neurologic: Coordination: heel-to-shin normal.

Assessment / Plan

1. Pain of left hip joint

M25.552: Pain in left hip

- MRI, HIP, W/O CONTRAST

Side:

LEFT

2. Avascular necrosis of the capital femoral epiphysis- Left

M87.859: Other osteonecrosis, unspecified femur

- PEDIATRIC ORTHOPEDIC REFERRAL - Schedule Within: provider's discretion

Patient Instructions

BARRON - 00007

BARRON, E (id #4265, dob: 11/06/2007)

RTC prn or if symptoms persist or continue, we will order an MRI to rule out meniscal or other interarticular pathology.

Will refer to Dr. Gregory for eval and treatment.

Discussed at length with mother the seriousness of her issue given the injury occurred in November. She informed me that they do not have insurance (only catastrophic policy) so they try to limit clinic visits as much as possible.

Return to Office
